

CLIMATE AND BUSINESS SUMMIT

Future of Distributed Energy

March 29
1:00pm

Jordan Auditorium,
Mendoza College of Business

Falling prices of renewable energy and demand for resilience are leading to increased penetration of cleaner and more distributed energy resources on the electric grid.

As the grid and utilities shift away from the traditional operational model, new challenges but also business opportunities emerge to make the transition as smooth, seamless and exciting as possible.

How are businesses working together through this transition? What are the economic and social implications?
How will this energy transition change our lives?

Come meet and discuss these topics with our diverse panel of successful ND alumni that are actively involved in advancing the energy revolution.

TJ KANCZUZEWSKI
Chairman and Co-Founder,
Inovateus Solar

JOEL LINK
VP, Origination & Development,
Tenaska

CHRIS MCKISSACK
