Energy Studies Minor

A new minor beginning in Fall 2011 that is open to ALL undergraduate students

Do you want to know more about topics such as:

- How energy is produced and distributed?
- How much energy can be derived from different sources?
- Historical and economic frameworks that guide energy policy?
- Environmental consequences of energy technologies?
- How to assess the strengths and weaknesses of alternative energy technologies?

The new Energy Studies Minor can help you to answer these questions and more. A technical and non-technical track are available to suit your interests. Please visit the website for an overview of the program.
